

2022 Integrated Resource Plan (IRP)

The Integrated Resource Plan (IRP) process is designed to consider various generation resource scenarios that can be used to serve AES Indiana customers. As part of the IRP process, AES Indiana evaluated all aspects of our generation with key stakeholders to understand what the next phase of AES Indiana's generation could look like and to ensure the most cost-effective options for our customers.

Every three years, AES Indiana submits an Integrated Resource Plan to the Indiana Utility Regulatory Commission (IURC) that identifies a forward-looking 20-year portfolio of generation that provides safe, reliable, and affordable electric service to our more than 512,000 customers that considers potential risks and key stakeholder input.

Submitted every 3 years

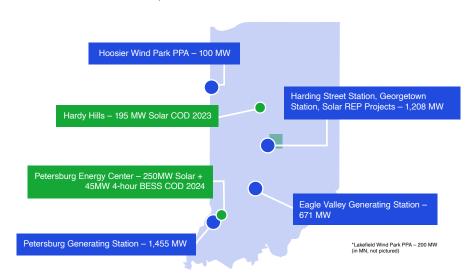

Includes a shortterm action plan

Input gathered at 5 meetings

About AES Indiana

3,634 Total MW of Generation

- 500,000+ regulated customers
- 3,634 MW of generation
- 528 square miles
- 8 counties in Indiana

2022 Integrated Resource Plan (IRP)

The 2022 IRP process began in 2021 and culminated in the Fall of 2022 with AES Indiana's 20-year outlook (Preferred Resource Portfolio) and short-term action plan. AES Indiana held five public advisory meetings during this time to provide stakeholders the opportunity to engage and provide input into the process.
